

# NURTIVO®

NUTRIENT-INFUSED, AMINO ACID BIOSTIMULANTS

**BUILT BY SCIENCE,  
DEVELOPED FOR RESULTS.**

# WHAT IS NURTIVO®?

NURTIVO® foliar fertiliser is not only a nutrient product, but has biostimulant effects on the plant.

Designed to do more than just provide essential plant nutrients, this innovative formulation induces a physiological biostimulant effect that facilitates the infusion of nutrients and amino acids, resulting in better plant growth, health, and productivity. With NURTIVO® foliar fertiliser you can be sure that your plants are receiving the nutrients they need to thrive and flourish.

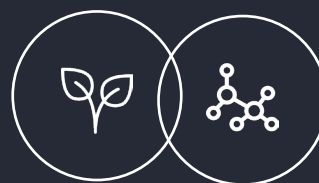

Each NURTIVO® product contains the associated nutrient(s) and specific amino acids that help with the uptake of that nutrient and biostimulants that have the desired biostimulant effect.

## OTHER PRODUCTS VS. NURTIVO®

### OTHER PLANT NUTRIENTS CHELATED WITH AMINO-ACIDS

Products that are currently in the market have a complexing or chelating agent bonded to the nutrient that aids in uptake and sometimes have some 'free amino acids'. These free amino acids are just a shotgun of amino acids and aren't specific.

### NURTIVO® BIOSTIMULANTS INFUSED WITH NUTRIENTS AND AMINO ACIDS

NURTIVO® products contain chelating/complexing agents, biostimulants and several organic acids. Each NURTIVO® product is unique because each has different amino acids and organic acids to create the desired effect on the plant at each stage of growth, as well as the specific chelating or complexing agents that go into each blend are the most suitable to that nutrient.

## BENEFITS TO FARMERS

NURTIVO® is specifically designed to improve plant growth and health by offering a 2-in-1 solution, a unique biostimulant product that is infused with nutrients and amino acids. The nutrients and amino acids in NURTIVO® work together to support the plant's metabolic processes, enhance root development, and improve nutrient uptake efficiency.

When using a NURTIVO® foliar fertiliser instead of a regular nutrient product, you're not only getting supplied the nutrient you require but also getting a biostimulant effect that aids in the function that you want the plant to be doing while supplying it with the nutrient.

The product nourishes the plant from the inside out, providing it with the necessary resources to fortify its natural defence mechanisms. Additionally, NURTIVO® is known to promote the growth of healthier and stronger plants, resulting in better yields.

NURTIVO® is a highly effective and innovative biostimulant product that offers a unique combination of benefits to plants. By using NURTIVO®, you can be assured that your crops receive the best possible nourishment and care, resulting in optimal growth and health.

Improved plant  
growth and  
health in 2-in-1  
solution

Biostimulant  
infused with  
nutrients and  
amino acids

Plants more resistant to  
environmental stressors  
such as drought, heat,  
and disease

Promote the growth of  
healthier and stronger  
plants, resulting in  
better yields

# HOW DOES NURTIVO® WORK?

Each NURTIVO® product's biostimulant package, organic acids and chelating and complexing agents are different. This is because each time you apply a different nutrient, your doing so causes a different effect.

For example, when applying NURTIVO® Calcium in any flowering crop, you are doing so to aid in cell division, flower set or pollen germination and the reason you need the plant to do this function is so that your fruit will have a good sized and uniform fruit, and strong skin/cells that can fight off disease and have a longer shelf life.

This is why NURTIVO® Calcium has a unique package to other products in the range because NURTIVO® Calcium has biostimulants and organic acids that aid in this metabolic process and all the NURTIVO® products have their own unique biostimulant packages, organic acids and chelating and complexing agents.

Most of the time, getting a nutrient into a plant isn't that difficult. In fact, many technologies can achieve this quite easily. The way NURTIVO® products differ is that it enhances the process that is happening at the time, causing the plant to seek out the nutrient because the function has been triggered by the biostimulant in the NURTIVO® product. The plant then mobilises and moves the nutrient to where the nutrient is most required.

The NURTIVO® philosophy is that if you supply the right biostimulant for the function required, then the plant is much more likely to aid in getting the nutrient to where it needs to go and achieve the function you want with the best possible outcomes because it has the nutrient with the biostimulant package and the natural organic acids.

## BENEFITS OF NURTIVO®

Every NURTIVO® product is formulated with a specific nutrient and amino acids that facilitate the uptake of that nutrient, and biostimulants that provide the desired biostimulant effect. Each NURTIVO® product is unique because it contains different organic acids and amino acids that are tailored to the plants needs at that stage. Additionally, the product is blended with specific chelating or complexing agents that are most suitable for that nutrient.

NURTIVO®	BENEFITS		
NURTIVO® BORON NURTIVO® CALCIUM NURTIVO® CMB NURTIVO® MOLBOR NURTIVO® TRACER COMBI NURTIVO® ZINC			
	Stress Relief	Cell Division	Pollen Germination
