

NURTIVO® POTASSIUM

NURTIVO® POTASSIUM is a unique formulation of nutrient-infused amino acid potassium. It has a unique package of biostimulants and organic acids for the purpose of correcting and preventing potassium deficiencies and enhancing a plant's ability in the functions of stomata regulation, fruit sizing, fruit ripening, fruit setting and increasing plant sugars. It has a biostimulant package containing specific amino acids, natural plant hormones and various other organic acids and plant extracts all of which aid in the plant's ability to carry out these functions.

When potassium is being used it is usually required by the plant in large amounts and a steady supply is required. **NURTIVO® POTASSIUM** provides this and the biostimulants and their effects continue to maximize the use of the potassium within the plant.

ANALYSIS 8% POTASSIUM w/v

NURTIVO® POTASSIUM is infused with multiple amino and organic acid compounds along with biostimulants to amplify the nutrient uptake and metabolic activity.

APPLICATION RATES

GENERAL RATES INFORMATION: This is a foliar-applied nutritional supplement used in agricultural applications that must be used diluted in water. When used as directed it is nontoxic to plant species specified.

Application rates should always be declared after having an agronomist or agricultural consultant take into consideration the entire fertiliser program and other nutrients being applied at the same time as this product. As some fungicides containing copper and sulphur can cause phytotoxicity issues when combined with or used near the foliar fertiliser application all care should be taken, and if combined with other chemistry, seek professional advice from your NURTIVO® representative.

Rates have been determined based on full-sized plants. If foliar applications are to be made on new plantations or immature plants then an agronomist or agricultural consultant should advise a lower usage rate based on the situation.

TREE CROPS: Apply at rates of 3.0–6.0L per hectare when increased potassium levels are required, and when fruit is developing. Multiple applications can be made throughout the season when the requirement for potassium is required. When using to correct potassium deficiencies or disorders use the higher rate once or two lower rate applications in succession 7–14 days apart.

NURTIVO® POTASSIUM APPLICATIONS:

GRAPES

ALMONDS

CITRUS

VEGETABLES

POTATOES

ONIONS

GRAPEVINES: Apply at rates of 2.0–4.0L per hectare when increased potassium levels are required and when bunches are developing. Multiple applications can be made throughout the season when the requirement for potassium is required. When using to correct potassium deficiencies or disorders use the higher rate once or two lower rate applications in succession 7–14 days apart.

BERRIES: Apply at rates of 2.0–3.0L per hectare when increased potassium levels are required and when fruit is developing. Multiple applications can be made throughout the season when the requirement for potassium is required. When using to correct potassium deficiencies or disorders use the higher rate once or two lower rate application in succession 5–10 days apart.

FIELD CROPS & VEGETABLES: Apply at 1.0–3.0L per hectare when increased potassium levels are required and when fruit is developing. Multiple applications can be made throughout the season when the requirement for potassium is required.

BENEFITS OF NURTIVO® POTASSIUM:

Stress Relief

Fruit Size

Fruit Ripening

Fruit Setting

Sugars
