

NURTIVO® TRACER COMBI is a unique formulation of nutrient-infused amino acid zinc, manganese, iron, boron and molybdenum. It has a unique package of biostimulants and organic acids for the purpose of correcting and preventing the associated nutrients deficiencies and enhancing a plant's ability in various functions associated with these elements. Functions relating to photosynthesis, chlorophyll production, pollen germination and other metabolic processes.

It has a biostimulant package containing specific amino acids, stress relief, natural plant hormones and various other organic acids and plant extracts all of which aid in the plant's ability to carry various functions. **NURTIVO® TRACER COMBI** helps to deliver micronutrients into the plant but also contains these essential organic acids that help the plant carry out these various functions associated with the micronutrients.

NURTIVO® TRACER COMBI APPLICATIONS:

ALMONDS

GRAPES /

CITE

ONIONS

ANALYSIS

2.0% ZINC + 2.0% MANGANESE + 1.0% IRON + 0.2% BORON + 0.1% MOLYBDENUM

NURTIVO® TRACER COMBI is infused with multiple amino and organic acid compounds along with biostimulants to amplify the nutrient uptake and metabolic activity.

APPLICATION RATES

GENERAL RATES INFORMATION: This is a foliarapplied nutritional supplement used in agricultural applications that must be used diluted in water. When used as directed it is nontoxic to plant species specified.

Application rates should always be declared after having an agronomist or agricultural consultant take into consideration the entire fertiliser program and other nutrients being applied at the same time as this product. As some fungicides containing copper and sulphur can cause phytotoxicity issues when combined with or used near the foliar fertiliser application all care should be taken, and if combined with other chemistry, seek professional advice from your NURTIVO® representative.

Rates have been determined based on full-sized plants. If foliar applications are to be made on new plantations or unmature plants then an agronomist or agricultural consultant should advise a lower usage rate based on the situation.

TREE CROPS: Apply at rates of 5.0L per hectare once tree growth has commenced. Multiple applications can be made throughout the season when the requirement for trace elements is required. Apply before and/or after leaf flushes and new growth has commenced.

GRAPEVINES: Apply at rates of 5.0L per hectare once vine growth has commenced. Multiple applications can be made throughout the season when the requirement for trace elements is required. Apply before and/or after leaf flushes and new growth has commenced.

BERRIES: Apply at rates of 3.0L per hectare once growth has commenced. Multiple applications can be made throughout the season when the requirement for trace elements is required. Apply before and/or after leaf flushes and new growth has commenced.

FIELD CROPS & VEGETABLES: Apply at rates of 2.5L per hectare once growth has commenced. Multiple applications can be made throughout the season when the requirement for trace elements is required. Apply before and/or after leaf flushes and new growth has commenced.

BENEFITS OF NURTIVO® TRACER COMBI:

Stress Relief

Cell Division

Pollen Germination

Flowering

Fruit Setting

Skin Walls
